U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05)

Continuation of 11. does NOT place the application in condition for allowance because: The details of final rejection mailed on 12/01/2005 show that Brunts anticipates claims 8-20, and Becker was cited to combine with Brunts to address the limitations of claims 21-25. It is important to note that the computer (92) of Brunts provided for storing and/or updating program instructions for storing or update sequence control since the computer associates with the RAM, ROM would perform storing and/or updating such the program instructions. The memory card (120), which is a storage device, provided for storing data, specially the destination related data. The computer coupled with the memory devices as illustrated in Brunts performs variety of tasks including updating instruction for storing. The data bus is also disclosed in Brunts (see figure 3, bus 80). It should be noted that the data bus is a connections between and within the processor, memory, and peripherals used to carry data.

In addition, the 103 rejection upon claims 21-25 is still proper since the combination would address the limitations as now claims (see the details of final rejection).

For that reason, the final rejection would not be withdrawn.
